

PENETRATOR

Shown above is a typical 1" 30 Way Right Angle NPT Penetrator which can be inserted in to a Chamber from the outside or to the inside. It has 2.5M PU Cable inboard and outboard and comes DNV approved. Tested in mixed gas to 450M. Can be used to 300MSW in helium or air. For Chamber or Bell.

The Penetrator we propose would be a 12 Way Right Angle 1" NPT with a coax. This will give you plenty of spares and would transmit video along with power.

We can also manufacture Penetrators $\frac{3}{4}$ " NPT, 1" UNF, 1.5" UNF and 2" UNF.
