UNDERWATER CAMERA CONTROLLER CC470-20-03

The Controller CC470-20-03 is designed to operate the CC550UC Colour Hat Mount Divers Camera along with CL12/35 Hat Mount Light with an Umbilical length of 250M.

The Camera Power LCD indicates the actual power that the Controller is transmitting when the Camera is functioning. If there is no Camera plugged in, the voltage will be slightly higher.

The Light Power LCD indicates the actual power that is being transmitted to the Light and is controlled by the Potentiometer Light Dimmer. Once again, if the Light is disconnected, the power will be slightly higher. The Light On/Off Switch totally isolates the power to the Light and the Power On/Off Switch totally isolates the power to the entire Unit.

The Controller operates from 110V AC to 240V AC 50/60Hz.

The On/Off Switches will illuminate if pressed regardless of whether there is power to the Controller. This is a mechanical function rather than an electrical indicator.

The Controller receives composite video signal and transmits composite video signal.

BACK OF CC470-20-03 CONTROLLER

(1) is the AC input, (2) is the video output to the Monitor/Line Driver and (3) is the Umbilical Connector
