

DOME LIGHT DL24-150SS

The DL24-150SS Dome Light is manufactured from Stainless Steel and can withstand diving depths of 300M plus. It only measures 30mm x 130mm excluding the connector and has a 240° wide beam angle which eliminates hot spots and red eye when used at close distance inspection via the CC550UC Underwater Camera. It allows the user to light up a very large area in low visibility areas underwater. The light is evenly distributed rather than a concentrated beam.

When used with any of Chalco's Camera Controllers, the intensity can be varied from 0-100% via the turn of a knob. The Light is also incorporated with an underwater pluggable connector and operates from multiple supplies (this can be specified).

It has a specially designed dome which can withstand temperatures greater than 400°C although the Light is to be used underwater where it will regulate its own temperature. The Light can be used as a Hat Mount Camera Light or hand held for general lighting.

Features

Type:	Dome Light
Dimensions:	30mm x 130mm
Weight:	250gm in air
Connector:	2 pin plus guide underwater mateable
Input Voltage:	24V AC/DC optional 12V AC/DC
Depth Rating:	300M MSW
Material:	Stainless Steel
Power Output:	150 watts (optional 20, 35, 50, 75).
