

PIPELINE INSPECTION CAMERA SYSTEM

The Pipeline Inspection Camera System (PICS) has been developed with reliability and serviceability in mind. The all weather modular construction enables fast identification of faults, quick repairs with minimal downtime.

The easily transportable design has been achieved with the help of customers feedback resulting in a system answering the day to day needs of the sewer and duct inspection business.

The system is available as two options:

- ▶ PICS-V - view only system (upgradeable to recording at a later date)
- ▶ PICS-R - view and recording system

The two systems are complimented with a choice of three reel sizes, two rod diameters and a range of five camera heads. Additional skids ensure that clear pictures can be obtained in pipe diameters ranging from 2" (50mm) to 14" (340mm) and beyond.

Control Module

8" (200mm) TFT LCD display - water resistant up to IP54 and recessed for easy viewing in strong sunlight

Control module can be mounted on the reel or placed on the ground - the handle tilts the module for easy viewing

New compact ABS injection moulded

Record directly to SD card

Transfer video file to portable USB memory stick

Distance Counter

External Microphone

Can be powered by mains, internal rechargeable batteries or 12V DC external power source

Internal Microphone

Integral Hard Drive DVR (digital video recorder) with playback function (160GB capacity)

Video out & video in functions for adding on site video, audio and snapshot function

Full function waterproof silicon rubber keyboard & enlarged titler memory capacity (10 pages)
